

# February *Packaging and Processing* for Cannabis Supplement

Presented by: **PACKAGING WORLD.**

## Reach the medicinal and recreational cannabis marketplace in this special stand-alone February supplement.

Cannabis manufacturers continue to search for proven, smart packaging and production solutions in the evolving marketplace. Our *Packaging and Processing for Cannabis* supplement, presented by *Packaging World*, will focus on best practices in package design, line automation and regulatory compliance. In addition, recyclability and child-resistance remain a top priority in safety and sustainability.

According to the 2020 PMMI Cannabis Market Report, the cannabis market is predicted to grow 28% by 2024. The report also found that the industry is facing two major challenges; one being the struggle with the wide variety of packaging options and types, and the other is designing and adapting processes and machines that are specific to cannabis. Your solution could be just what one of these producers has been searching for!

Distribution includes 5,000 printed issues mailed to *Packaging World's* cannabis contact list.

Plus, digital exposure on our brand websites and via e-mail.

**Supplement ad closing:** Jan.7

**Ad materials due:** Jan.13

**Mails in February**
