

LEADERS — IN PACKAGING 2022 —

Cartoning, Multipacking & Case Packing

The following companies are leading suppliers of packaging technology solutions in these categories. To see all Leaders in Packaging across all equipment and materials categories, please visit Packworld.com/leaders.

CARTONING EQUIPMENT

The HD-RSP heavy duty integrated robotic cartoner

The HD-RSP is a compact cartoner that utilizes AFA or Fanuc Delta 3 robots to pick, orient, and collate product from upstream equipment. Applications include sachets, pouches, bags, bars, and stick packs.

CARTONING EQUIPMENT

Direct-placement carton & tray erector

The HS Carton Erector / Tray Erector uses a 'direct placement' method of feeding the carton blanks into the forming tool, for an easy setup using factory-set tooling. The machine erects cartons and trays using a conventional four corner lock system or hot melt glue.

CARTONING EQUIPMENT

Economical horizontal carton erect/load/close machine

The E-System 2000 is an automatic horizontal cartoner for erecting, loading, and closing end load cartons.

CASE PACKING EQUIPMENT

Robotic case packer for lightweight plastic containers

Its smooth robotic packing action ensures max bottle stability when packing lightweight plastic containers, protects glass integrity when packing bottles or jars, and provides no-impact handling of heavy containers.

CASE PACKING EQUIPMENT

Case packer handles wide range of package types

The Acclaim® Knock Down Case Packer can handle a wide range of products, including thermoformed trays, cups, and cartons. It orients the products for your desired case pattern by either tipping or not tipping the collated products via changeover.

CASE PACKING EQUIPMENT

Wraparound case packer produces different case styles

The Wraparound 100 is a highly flexible, modern, servo controlled horizontal case packer. It distinguishes itself with its unique Catamaran construction style, and is able to produce different case styles, offering you a large size range.

MULTIPACKING EQUIPMENT

Shrink bundlers reach speeds to 45 bundles/min

EDL's single roll wrapping systems offer high throughput rates typically from 20-45 packs per minute. Common applications include trays of food or beverage product and collations of containers.

MULTIPACKING EQUIPMENT

Semi-automatic shrink wrapper

Designed for applications with lower throughput requirements, semi-automatic wrapper relies on operator to load and activate each wrapping sequence.

The above market-leading companies participating in *Packaging World's* 2021 Leaders in Packaging Program are named sponsors of *PW's* Future Leaders in Packaging scholarship. This year's recipient is Purdue Northwest (PNW) College of Technology. We appreciate the support of all participants on behalf of packaging education.

Cartoning, Multipacking & Case Packing

MULTIPACKING EQUIPMENT

Professional series automatic bundler EB25A

The EB25A automatic bundler is designed with all features needed for sealing a wide variety of films including polyolefin, polyethylene, and PVC.

MULTIPACKING EQUIPMENT

597 Tritium™ modular multipacker/bundler

The Standard-Knapp Tritium™ Multipacker features a modular construction and a high-efficiency heat tunnel. The multipacker arranges and neatly wraps bundles of product, producing outstanding bull's eyes to ensure that your message gets conveyed.

Palletizing & Load Stabilization

The following companies are leading suppliers of palletizers, depalletizers, stretch wrappers, stretch hooders, strapping and other types of load stabilization. To see all Leaders in Packaging, please visit Packworld.com/leaders.

PALLETIZING

High-level bulk palletizer reduces change cycles up to 40%

Reduce pallet change cycles by up to 40% with the Viper Series™ High Level Bulk Palletizer. This high-speed automatic bulk palletizer delivers container loads at speeds of up to 12 sweeps per minute.

PALLETIZING

Fully automatic inline palletizer

The HL9200 is our most advanced and highest speed palletizer. Its flexibility starts with the easy to operate Product Manager HMI where the operator can create new patterns or modify existing patterns that will automatically adjust the programmable laner.

PALLETIZING

Automated bulk container palletizer

The GR-X automated palletizer system is designed to prepare full-height pallets measuring 44" W x 56" L x (up to) 110" tall of empty plastic containers or aluminum cans.

PALLETIZING

Robotic palletizer handles flexible pack patterns

Robotic palletizers from Honeywell Intelligated are designed to increase your pattern flexibility and enable fast, easy product reconfiguration while increasing throughput, improving ergonomics and reducing labor costs.

PALLETIZING

Modular economical palletizer

The 3rd gen. Robox is a modular and economical palletizer offered in over 20 pre-configured floor plans. With its compact footprint, it easily adapts to changing layouts and utilizes OptiStak, to set new or adjust pallet patterns directly from the HMI.

PALLETIZING

High infeed palletizers

High infeed case palletizer model groups share common functional modules and frame systems to provide comprehensive palletizer solutions. Shared modules maximize layout flexibility and cut costs via increased manufacturing and machine controls efficiencies.
