Second Look: **Connect with Attendees Who Didn't Visit Your Booth**

Dear Exhibitor,

Here's your personalized edition of the post-show *Second Look* Exhibitor Guide, showcasing your detailed listing with comprehensive product and company information. We customized it specifically for you.

This exclusive feature not only highlights your offerings but also maximizes your visibility and impact among potential clients and industry partners.

Each attendee who selected interest in their choice of exhibitor solution categories when registering for the show will receive a tailored edition of *Second Look* with only those products, ensuring your reach extends to those who may have missed your booth.

The post-show guide amplifies your visibility beyond the PACK EXPO floor, reaching both known and new prospects alike.

Best of luck in your follow-up efforts and we appreciate your partnership!

Best,

David Newcorn
President

Orbital Side Sealer – High Throughput, Max Flexibility

Continuous Motion • Up to 200 Feet per Minute • **OSS-209**

The OSS Series is Texwrap's highest speed continuous-motion side sealer line. This design uses orbital seal head wrappers, patented by Texwrap, that combine very fast, precise servo controls with an elliptical motion of the sealing head. The OSS Series is designed for the special requirements of the food production environment.

Kayat SRX Single Roll Bundler - Use Clear or Printed Film

Single Roll Shrink Bundler • Up to 60 Cycles per Minute • **Kayat SRX**

The Kayat SRX is the solution for shrink bundling trayed or loose product with the option to use clear or print registered films. The SRX uses bottom overlap seal technology for strong seals and improved product presentation. It is packed with an updated Allen-Bradley controls package with predictive maintenance flags. The SRX series is designed to run 24/7/365.

[INFO](#) pe.show/ngarrido/32

In-Line Shrink Bundler - Wrap Trays of Product

Continuous Motion • Up to 25 Cycles per Minute • **DX 130 Series**

Ideal for wrapping trays of product in clear film, the DX 130 Series uses dual rolls of film to shrink bundle product with a bullseye at each end. The DX 130 Series is designed to run continuously and withstand the rigors of a production environment. Each machine has a heavy-duty welded tubular steel frame and utilizes servos on all movements.

[INFO](#) pe.show/ngarrido/31

Use Inline with the Filler - Wrap Product While Still Vertical

High-Speed Vertical Wrapper • Patented Orbital Seal • **OVS-914**

Texwrap's high-speed OVS Series vertical shrink wrappers are ideal for end-of-filling-line shrink packaging. It wraps products such as bottles, cans and jars while in the vertical position. A full top or bottom trim seal securely encloses the product and eliminates the seam across the side panel. Often used to multipack for retail sale, the precise product and film control of the OVS series allows high-speed operation with precise print registration.

[VIDEO](#) pe.show/ngarrido/30

An industry innovator, **Texwrap** holds patents on some of the most significant breakthrough technologies in the shrink wrapping and bundling business. **Texwrap** produces automatic shrink wrapping systems, L-bar sealers, side sealers, vertical sealers, tunnels, infeed solutions and conveyor systems for e-commerce, food, bakery, industrial, pharmaceutical, nutraceutical, retail printing and publishing industries. **Texwrap's** equipment is all made in the USA.

Washington, MO • (636) 239-7424

Hello Nicolas: We are disappointed we didn't get to connect at PACK EXPO, and we wanted to encourage you to contact us to discuss your next packaging project.

High Speed Continuous Motion Side Sealers

Side Seal / Horizontal Cross Seal • 80ppm • S-50 + T-63

Built for performance and versatility, Garrido's Continuous Motion Side Sealers deliver smooth operation and rapid changeovers powered by five servo motors. With sealing widths from 15" to 48", they handle a wide range of products. Finishes are available in painted or stainless steel to meet your hygiene requirements. Flexible infeed options—belted, lugged, or flighted—adapt to production needs. An automatic changeover feature enables size adjustments in under one minute with a quick scan.

[INFO](#) pe.show/ngarrido/52

Entry Level Automatic L-Bar Sealer and Tunnel

Automatic L-Bar • 25 - 30ppm • L-728 + T-201

The L-728 Sealer and T-201 Tunnel are the ideal combination for entry-level applications—affordable, reliable, and built with the same trusted quality Garrido is known for. Equipped with a closing conveyor for small products and full safety guarding, the L-728 ensures safe, efficient operation. A variety of infeed options—belted, lugged, or flighted—provide the flexibility to suit your production needs.

[INFO](#) pe.show/ngarrido/56

High Speed Continuous Motion with Vertical Cross Seal

Top Seal / Vertical Cross Seal • 110ppm • V-30 / V-50

The V-30 and V-50 Continuous Motion Sealers are designed to wrap tall products at high speeds. Normally running in line with filling equipment, they are ideal for single and multi-packs. They can be conveyor fed or integrated with screw systems to produce multi-packs such as 2 pack shampoos or 12 pack mini liquor bottles. These are especially popular with contract packagers for wrapping promotional packs upright, eliminating the need for glue dots.

[INFO](#) pe.show/ngarrido/55

High Speed Continuous Motion with Horizontal Seal

Top Seal / Horizontal Cross Seal • 100ppm • SV-50 + T-63

The SV-50 was designed specifically for odd shaped products such as produce and meats. There are certain products that tend to shift during conveyance. The SV-50 has a belted troughed infeed conveyor that keeps the product stable until it reaches the vertical film inverting head which encapsulates the product in film to keep it from shifting. The product is then top sealed and the bag gets finished with our servo box motion cross sealer. The T-63 shrinks the product to a final retail appearance.

[INFO](#) pe.show/ngarrido/54

Garrido USA is a proud family owned business that specializes in horizontal automatic shrink wrapping, bagging, bundling, and e-commerce equipment. With a nationwide distributor network, we deliver affordable, high-quality machines built with the latest technology to handle even the toughest production demands. Backed by proven performance and unmatched service, Garrido USA helps you boost efficiency, cut costs, and achieve professional-grade packaging every time.

Miami, FL • (305) 593-9030

Dear Nicolas, sorry we missed you at the show. We would love to find out more about your packaging and automation needs. Reach out to us at sales@garridousa.com.

Fres-co System USA, Inc.

Years in business: 47+ • Employees: 450+

Type in the **URLs** below to view product **INFO** or **VIDEOS** from this featured PACK EXPO Las Vegas exhibitor.

Packaging Materials

Fully Customizable • Recycle-Ready Options • Stock Options

Including Bags, Pouches, Rollstock, Lidstock, FIBCs, Foil Liners, Taps and Fitments for Coffee, Food and Beverage, Chemicals, Food and Feed Ingredients, Pet Food, and More

INFO pe.show/ngarrido/42

Packaging Machines

Industrial Sealers • Vertical Form, Fill, and Seal • Fully Customizable

Heavy-Duty Industrial Bag Sealers and Continuously Reliable VFFS Machines Engineered for Recycle-Ready Materials for Whole Bean and Ground Coffee, Liquid Food and Beverage, and Dry and Pet Retail Products

INFO pe.show/ngarrido/48

Degassing Valves

Made in the USA • Allow CO₂ and O₂ Escape • Protect Product Integrity

New Ultrasonic Valve, Ideal for Recycle-Ready Materials; Included in Pre-made Packages or Integrated through VFFS Packaging Machines

INFO pe.show/ngarrido/47

Service and Spare Parts

Based in the USA • Packaging Machine Experts • In-Stock Spare Parts

Trust Fres-co's Packaging Machine Experts with all your Continuous Improvement Activities, Initial Consultations, Installation, Training, Preventive Maintenance, Equipment Upgrades and Spare Parts Provision

INFO pe.show/ngarrido/46

For over 45 years, **Fres-co System USA, Inc.** has manufactured high-performance flexible packaging systems and invented dozens of innovative packaging technology breakthroughs. Our machines and materials are employed by Fortune 500 leaders and some of the most famous specialty brands in America. We offer integrated packaging materials, machines, degassing valves, service, technology and innovation for coffee, food and beverage, pet food, ingredients, chemicals and more.

Telford, PA • (215) 721-4600

We hope to see you next year at PACK EXPO, Nicolas!

Garrido USA / Advantage Machinery

Years in business: 37+ • Employees: 24+

Automatic Paper Mailer System

Curbside Recyclable Paper • 12 - 15ppm • **AMS-JR. 24**

The AMS-JR is a fully automatic paper mailer for e-Commerce, using two rolls of curbside recyclable, heat-sealable paper to create durable, ready-to-ship mailers. Its vision system pulls order data from your WMS, prints and applies labels, verifies info, and handles final sortation. With a compact footprint and user-friendly design, the AMS-JR delivers an efficient, sustainable, and cost-effective solution for modern distribution centers.

INFO pe.show/ngarrido/37

Auto Changeover High Speed Shrink Wrapper

Automatic Change Over • 80ppm • **S-50E + T-63**

The S-50E is a high-speed shrink wrapper featuring fully automatic changeover between product runs. Once the current production run is complete, the operator simply scans the next job, and the machine automatically adjusts the following: infeed conveyor guides, spacing conveyor width, film carriage width position, film inverting head height, side seal height, cross seal opening, tunnel fan, and conveyor speed control. This saves labor and downtime, keeping your production line running smoothly!

INFO pe.show/ngarrido/40

Entry Level Automatic Shrink System

Auto L-Bar • 25 - 30ppm • **L-728 + T-201**

The L-728, paired with the T-201, is the ideal machine for an entry into automation. The L-728 has the capability to run opaque film to cover barcodes on the products, a feature often necessary for e-Commerce. The L-728 is a heavy-duty machine built to withstand the demands of production floors and distribution centers. Multiple infeed options such as belted, lugged, and flighted allow the machine to adapt to different production needs.

INFO pe.show/ngarrido/39

High Speed Continuous Motion Bagger

Side Sealer • 80ppm • **S-50**

The S-50 is our most popular machine for its reliability, durability, and versatility. Most often used for high-speed shrink-wrapping applications, the S-50 can also be used as a bagger, with both clear and opaque film. Clear film applications are primarily for dust covers and product storage within fulfillment centers, while opaque film is used for direct-to-client mailers. The machine can be equipped with a splicer, centerfolder, print registration, a pressing system to remove air, & more.

Sign up to be notified of PACK EXPO Las Vegas 2025 Innovations Reports. Scan the QR code to be the first to know when this year's reports drop.

SUSTAINABLE PACKAGING

While your rivals fumble through generic sustainability reports, you'll have the insider's playbook to packaging's most disruptive eco-innovations. Technologies that will redefine green packaging standards. This isn't surface-level coverage. It's the strategic intelligence that separates sustainability leaders from followers.

ROBOTICS

The age of human-only packaging lines is ending, and smart companies are already building their robotic advantage. Collaborative robots, autonomous systems, and AI-powered solutions that will redefine what's possible in packaging operations. While others cling to outdated processes, you'll be engineering the future of efficient, error-free production.

DIGITAL TRANSFORMATION

Digital-native competitors are quietly building unbeatable advantages through AI-powered quality control, predictive demand forecasting, and smart packaging design optimization, while traditional operations remain vulnerable to disruption. This report identifies the digital weapons that protect market share from tech-savvy invaders. This isn't about innovation anymore. It's about defending what you've built from companies that were born digital.

FLEXIBLES

The flexible packaging industry is experiencing a polymer renaissance, where breakthrough material science is creating films and structures that challenge everything we thought we knew about packaging limitations. Scan for sugarcane-based PE with identical performance to fossil-fuel alternatives, multilayer films with simplified compositions, and barrier technologies that achieve superior protection with reduced environmental impact.

CONVEYING

The ultimate conveying challenge is engineering systems that maximize velocity while maintaining absolute product integrity, creating the perfect balance between speed and care that defines world-class operations. See how cutting-edge conveying technologies, gentle product handling, and precision timing systems engineer velocity breakthroughs that accelerate throughput while treating every product with the delicate precision it deserves throughout its entire journey.

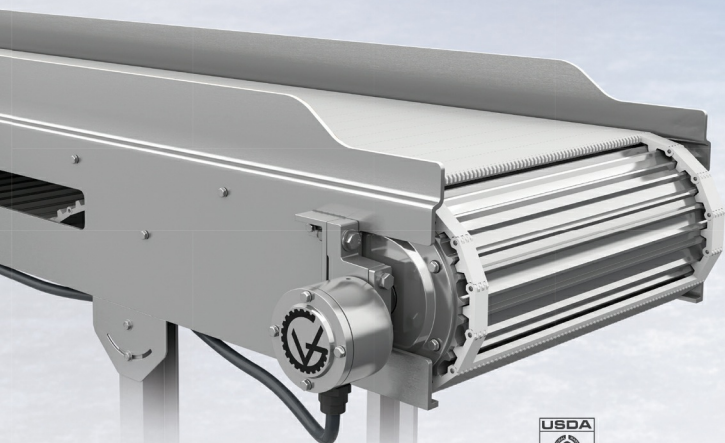

VDG Drum Motors

Maintenance-Free Conveyor Belt Drives

Engineered for reliability and longevity, VDG Drum Motors are designed for 80,000 hours of continuous operation before maintenance, reducing operational and maintenance costs and increasing throughput.

With all drive components enclosed and protected inside the drive drum, VDG Drum Motors provide a safe, efficient, and space-optimized conveyor belt drive solution for material handling applications while minimizing downtime.

- ▶ No Routine Maintenance
- ▶ Lower Cost of Ownership
- ▶ Premium-Efficiency Electric Motor

For sanitary processing, the SSV Series Drum Motors are manufactured in 316-stainless steel, feature an IP69K-rated sealing system, withstand pressure up to 3,000 psi, and drive modular, wire mesh, and monolithic thermoplastic conveyor belts without using sprockets.

- ▶ Increase Conveyor Hygiene
- ▶ Eliminate Drive Sprockets
- ▶ Reduce Water Usage & Time for Washdown
